Research Experience Internship at NYU Langone Health at RUSK Rehabilitation
530 First Avenue (at 30th Street) - 9th Floor
New York, NY 10016

Dear Michelle:

I am profoundly interested in a volunteer internship at NYU Langone Health at RUSK Rehabilitation, which was posted on the bulletin board in the Department of Biostatistics at Mailman School of Public Health. At present, I am a graduate student at Columbia University with a major in Biostatistics. I also hold a bachelor's degree in Mathematics, which gives me decent knowledge of statistical analysis that will be needed for this position. My research experience at Columbia University exposed me to the health care industry. As a research assistant I work on a project titled: Racial Differences in Recurrent Adverse Cardiovascular Events. This project allowed me to work with computing software SAS, where I imported data, clean data, did exploratory analysis and also perform statistical analysis. In my research experience I also witnessed how the patients were recruited and how the data was collected for this project. I've taken a SAS course in my past semester and I'm currently taking a Relational Databases and SQL Programming course which teaches me the techniques to collect, store, retrieve and control the quality of data in research projects.

My research experience allowed me to develop great teamwork skills while working independently. I have great communicational skills and can easily find a common ground with a variety of people, while respecting differences in views and beliefs.

I am a smart, dedicated, and hard-working student and I would welcome the opportunity to be interviewed at your institution. Please contact me at your earliest convenience to further discuss my qualifications and the position. I can be reached by email or phone. I look forward to meeting you.

Sincerely,

Keyanna Davis
